Case Study

Investigating Earth Science in Urban Schoolyards

Investigating Earth Science in Urban Schoolyards is a project promoting field-based earth science education in urban elementary schools through the examination of local ecosystems, teacher training, and standards-based lessons. Syracuse University and the Syracuse City School District are collaborating to improve the teaching and learning of science in the elementary school.

The services Hezel Associates provide include designing, gathering, analyzing, and disseminating both formative and summative data for this project.

Hezel Associates provides design consultation on teacher surveys, teacher observation instruments, and student surveys. Hezel Associates will complete a final summative report for the project.
